

Let's protect the beautiful environment for future generations!

Pollutants in rivers, lakes or seas are mainly caused by domestic wastewater discharged from individual households.

Domestic Wastewater Treatment System is equipped with sophisticated treatment function which purifies domestic wastewater and return it to irrigation channels or rivers.

In the area the sewage system hasn't developed well yet, domestic wastewater system should be installed to preserve beautiful water environment.

I'm in charge of cleaning wastewater from households!

Johtaro, the Johkasou Treatment Tank

**Maintenance must be done
by "Team Treatment Tank"!**

You can conduct some maintenance on your own, some other should be done by professional vendors.

Treatment Tank is "ALIVE"!

In the treatment tank, domestic wastewater is purified by the working of the bacteria decomposing pollutants. Thus, proper use is important to keep its function.

Wrong use make bacterias inside of me suffer and they can't work properly.

What you can do on your own

In the bathroom

- Tissue papers insoluble in water, dippers, sanitary materials and cigarette butts shouldn't be flushed down the toilet.
- Don't flush remaining detergent all at once.

When doing laundry

- Measure and use the appropriate amount of laundry detergent.
- Refrain from using a large amount of bleach.

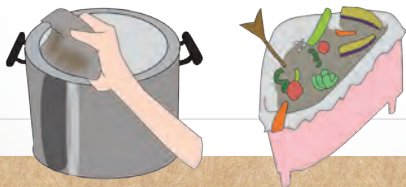

In the bathroom

- Do not use a large amount of chlorine-based mold remover.
- Do not flow remaining water in the bathtub and grey water from washing machines simultaneously.

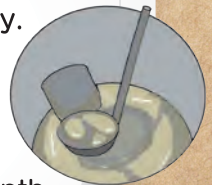

In the Kitchen

- Do not dump used oil or kitchen waste down the sink.
- If pans, pots or dishes are so dirty, wipe them off with paper before washing.

When using domestic wastewater treatment system or sewage basin

- Never turn off the blower definitely.
- Do not put anything.
- Clean sewage basin which wastewater from the kitchen is discharged into about once a month.

What you should make a request to professional vendors

- 1 Water quality examination**
(Examinations designated by law, once every year)
- 2 Maintenance and inspection**
(Such as disinfectant replenishment, once every month)
- 3 Regular cleaning**
(Such as sludge removal, over once every year)

Water quality examination

Maintenance and inspection

Regular cleaning

If any problems occur

If you find any problems like that treated water get muggy or there is a bad smell during use, please inform your maintenance and inspection vendors immediately.
